BATMAN

SCENE 1: THE CITY OF GOTHAM

THE CITY OF GOTHAM WAS A CITY OF CONTRASTS. IT WAS A CITY OF RICHES AND POVERTY, OF LIGHT AND DARKNESS. IT WAS A CITY WHERE THE NIGHT WAS ALWAYS WATCHING YOU.

SCENE 2: THE BAT CAVE

IN THE HEART OF GOTHAM CITY, THERE WAS A PLACE WHERE NO ONE WOULD EVER FIND HIM. IT WAS A PLACE OF SECRETS AND SHADOWS. IT WAS THE BAT CAVE.

SCENE 3: THE BATMAN

HE WAS THE BATMAN. HE WAS THE NIGHT. HE WAS THE DARKNESS. HE WAS THE GOTHAM CITY PROTECTOR.

SCENE 4: THE BATMAN IN ACTION

HE WAS ALWAYS THERE WHEN YOU NEEDED HIM. HE WAS ALWAYS THERE WHEN YOU WERE IN DANGER. HE WAS ALWAYS THERE WHEN YOU WERE IN NEED.

SCENE 5: THE BATMAN'S SECRET

HE WAS ALWAYS THERE WHEN YOU NEEDED HIM. HE WAS ALWAYS THERE WHEN YOU WERE IN DANGER. HE WAS ALWAYS THERE WHEN YOU WERE IN NEED.

■ **What is the purpose of the study?** The purpose of the study was to determine the effect of a 12-week, low-intensity, supervised exercise program on the physical and psychological health of older adults with chronic low back pain.

and the other two were not. The results of the study were that the two groups that were not given the intervention had a higher rate of relapse than the group that was given the intervention. The results of the study were that the two groups that were not given the intervention had a higher rate of relapse than the group that was given the intervention.

DETECTIVES WITH ELECTRIC EYES

**They Are Electronic Devices, Which Can
React to Anything—Walking, Talking, Even
The Crumpling of a Piece of Paper**

THE burglar watched the moon slide behind a thick cloud, and grinned with satisfaction. This is going to be easy, he muttered. He had bypassed the gates leading to the big estate, having learned previously that no electric eye would get the alarm the moment anyone passed through.

Moving steadily to the rear of the estate, he threw a portable ladder to the top of the high wall, and minutes later found himself inside the grounds.

But all he could take was one single step. For that very instant the alarm was baffled in blinding floodlights. Whoever he turned a large searching beam followed panting him. At the same time, a loud alarm clanged away.

Within minutes the hapless burglar found himself surrounded by guards who had come running from all directions.

This burglar was not the only one

in recent years to learn that electronic is of considerable value to the law. Electronic was born as a crime-stopper some years ago with the elementary electronic, that some of the new uses of the electric eye sound so incredible that they are hard to believe. But they are true. The best of the matter is that no matter what device electronic burglar may use for breaking in, the police are one step ahead of them. The long arm of the law is armed and alerted with electric eyes.

In the above case electronic watches were placed in such hidden places as a tall tree, the garage roof, or a low bush. The moment a person stepped inside the field of sensitivity the watches automatically checked wire circuits, bringing revolving lights and warning alarms.

In another case, burglars carelessly found a safehouse containing a large quantity of loot. Finding

certain that all in common and now down had been a common experience. They sagged down, and then they stood up. They sat upon the ground, having down through the floor, as an office located above the water house.

To their dismay they learned that the floor of the warehouse had also been treated electronically with burglar proofing. No matter what they did on the floor there an electronic switch clicked on. Next came a red warning light in front of the warehouse started blinking on and off. At once, the police officers on the boat put through a call to headquarters for rescue. The burglars were caught before they could remove a single bar.

In a small and western town and long ago, two safe-crackers broke into a bank and spent three hours looking down every through a door of gun bars guarding the vault.

The electronic safety was not aware the moment they stepped past the threshold of the bank. A red wire gate slowly came out of the wall, stopping the burglars inside the vault. At the same time, a device located at headquarters informed police exactly what had happened. For perhaps the first time in their lives, the burglars were glad to see police officers when they arrived to remove them from their prison.

The electronic wall can be made to keep its almost anything. The man here already have perfected they will do something of a person's work, better or even complete a sheet of paper. Some of the things

it will print are on lights, like detecting that about. They put the

around the most amazing electronic system was demonstrated recently in the east where a whole burglar's by common had ordered a number of burglars.

The burglars had succeeded in obtaining from a worker in the firm a detailed plan of the burglar alarm system. To keep off the burglar alarm system, the thieves used only a flashlight to locate them, and a pair of steel shoes.

What eventually trapped them was an electronic device that was designed to set off a warning alarm the instant a flashlight was trapped in.

Available right now is an electronic watchman for the small home owner who usually keeps a light burning in the house to keep thieves away while the family is away at night.

The unit is built around a phototube. The collector of the tube is placed to face the window so that it can notice the changes of light outside.

When the light intensity falling upon the photo cell drops below a certain point, a relay closes the main leads to the system, turning on the room lights. That is what happens in the evening when it starts getting dark.

Then at dawn the brightening light outside opens the contacts, turning off the room lights.

Any electrician can install one of these electronic watchmen at your home at slight cost.

1. The first step is to identify the problem. This involves understanding the symptoms and the context in which they are occurring.

Figure 1. The effect of the concentration of the polymer solution on the surface energy of the polymer film. The concentration of the polymer solution was 0.1, 0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8, 0.9, and 1.0 g/dL. The surface energy of the polymer film was measured by the contact angle method. The surface energy of the polymer film was 20.5, 21.5, 22.5, 23.5, 24.5, 25.5, 26.5, 27.5, 28.5, and 29.5 mJ/m², respectively.
